Thank you.

The pUFs will be analyzed separately.

The glass wool will be analyzed with the solids. The separate IDs may be dropped and we would have 2 sample "containers" with the same I'd. Will know Monday.

Subject: RE: HV Schedule for Next Week

Hi Kristen –

Thank you for the schedule. LBG will observe the Equipment Blank from the dock on Tuesday and will observe and collect a split sample at NBS on Wednesday. The LBG staff is Xiulan Wang (cell 917-881-9288).

I have a few questions on the sample IDs that you provided. Please let me know:

- The PUF cartridges have two separate IDs. Will they be analyzed together or separately?
- The solids from the Gravity have two separate IDs. Will the glass wool be analyzed separately from the 8oz jar?

Thanks
AM

Subject: HV Schedule for Next Week

Please forward as needed.

The schedule for next week is attached. There are also tabs that provide the bottle IDs for the HV samples where EPA is splitting. As Axys is using only a single 2L bottle, but there are 5 to accomplish other QC, the main bottle main be labeled without the "COMP-1" appendage. The other bottles' IDs are per EPA discretion.

Please provide me your contact information ASAP, and let me know if anyone wants to observe Equipment Blanks from the docks. Note that if we finish Kill van Kull at a reasonable hour, the team may collect the EB that evening at LLYC rather than wait for Friday. We will make that call on Thursday, unfortunately. I would like to allow people to get home as early as possible for the upcoming holiday week!

If you have any questions, do not hesitate to contact me AT ANY TIME. I will be available all weekend and will be at the facility next week.

As discussed, if there are any changes, I will relay the information as soon as I can. Specific contact information for who will be observing is critical.

Thank you for your patience.
